

TricLed.com F3-T Rear side saddle bag reflector

Contents of your package

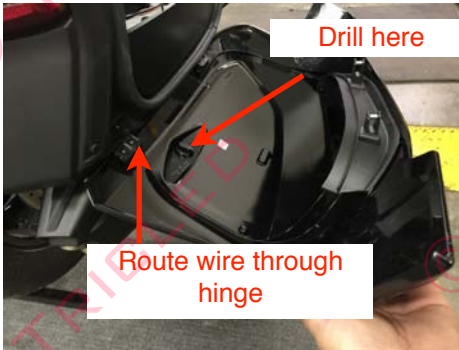

- 2 Specially design triangle LED.
- 2 OEM Harness.
- 4 male bullet terminal

Alcohol and primer

Open rear saddle bags and unbolt the cable that holds the door.

Drop the door down until the hinge comes off the pivot point and pull out towards the side. Working with the saddle bag off allows for better control while installing. Repeat for both sides.

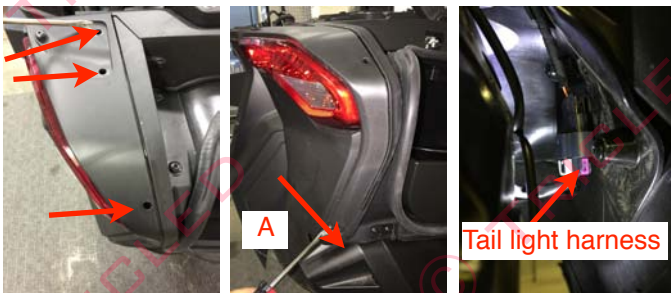

Clean the surface with the provided alcohol pad, apply primer to both doors prior to installation.

From underneath the saddle bag you will see a slot opening that goes into the rear tail section. You will route your wires through here. Use a plastic loom to cover all exposed wiring. See next step to remove tail light section and install the factory harness.

Pass wire through and adhere the new Triangle reflector,

Pass the small connector through the saddle bag hinge. The opening is just large enough to pass the connector. Use di-electric grease and connect the silver bullet to the Triangle LED.

Remove factory triangle reflector. Using a heat gun or hair dryer is a good way to soften the adhesive for easy removal. Once removed position the new reflector and note where the center of the wire exits the back. Drill a hole through the case large enough for the quick connect

Remove the 4 push pins as shown above and pull tail light cover slightly to reveal the light harness. In pic A there is an opening from the bottom of the tail-light. Run your harness through here and connect to saddle bag door.

Disconnect factory OEM harness from tail-light and attach the new supplied OEM harness. Connect the following

Be sure to tuck and neatly organize all wires here and zip tie snug to the factory harness. Do not over tighten zip tie.

USE DI-ELECTRIC GREASE ON ALL CONNECTOR TO PROTECT IT FROM OXIDATION AND WATER INTRUSION.
