

SLINGSHOT RGB KIT 2 FRONT TOP SPOILER AND GRILL

Kit #2 content:

Alcohol pad, primer

(2) 90" RGB strip (bottom of painted spoiler)

(1)18" RGB strip (top of front grill)

(1) 24" extension

(1) 12" extension

Kit #2 contains 3 sections. Two of the 36" RGB strip will be installed underneath the painted spoiler which is directly above the bottom black plastic spoiler. This will give a shadowing effect to the spoiler.

Start at step 1 and test fit the LED strip. Clean surface with alcohol and use primer for all plastic pieces. Make round radius turns and do not make sharp bending turns to the LED strip or it will be damaged. See step 2. For the right side (passenger side) you will use the 24" extension then connect to the 1:6 splitter from Halo kit #1.

Repeat for opposite side. Left side spoiler will use the 12" extension and connect directly to the 1:6 splitter.

Install the front of the grill directly in front on the top flat piece. See step 3. Run the cable out to the driver side as shown and connect directly to the 1:6 splitter.
