

# SLINGSHOT DEMON EYZ

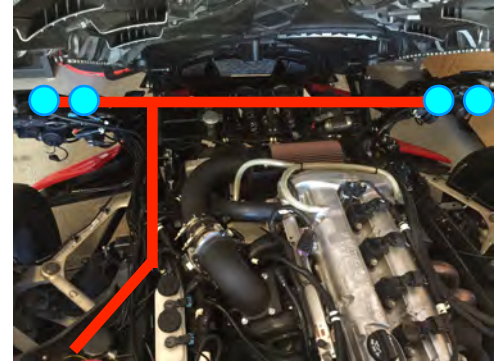

USA Model

2 Demon Eyz light harness  
1 wiring harness  
2 LED bulb

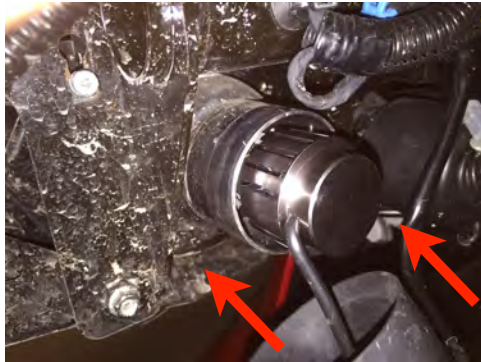

USA/Canada Model

4 Demon Eyz light harness  
1 wiring harness  
4 LED bulb  
1ch remote

Layout the harness as shown, this will allow for easy plug for all your Demon Eyz harness. For USA you will only use one of the plug from each side while USA/Canada will use both plugs on each side.

The Demon Eyz bulb harness will be plugged into the headlight housing from the bottom. For clarification see the picture to the right for better illustration.

Headlight housing flipped upside down for illustration. If you have USA lights, you will pull the white rubber plug on the right and insert the new Demon Eyz harness with your LED tip light. For Canada setup, pull the factory T-10 running light harness out and insert the new Demon Eyz harness. Note the green color wire from the original T-10 harness, you will pull this green pin out of the the 3 prong harness. See picture below.

Green positive wire from OEM T-10 harness. Disconnect the pin from factory 3 prong harness shown on right picture.

Remove the white clip that holds the wire pins. Insert a small screwdriver from front to release the pin. This will disconnect the factory t-10 light.

Connect all T-10 LED's to the harness, connect end of harness to receiver and connect power. Test your Demon Eyz with your remote.
